A table row split across pages

One row too tall for what is left of the page, continued on the next. Look for the description carrying on where it stopped rather than restarting or dropping a line, for the grid being redrawn around each half so no text floats outside the table, for the short cell beside it still being drawn though it has nothing left to say - a row showing fewer cells than the table has columns is refused by veraPDF and unreadable aloud - and for the header repeating above the continuation.
